

Amendments to the Abstract:

Please amend the Abstract of the Disclosure as submitted herewith on a separate unnumbered page. The Abstract, as amended, recites that R1 of the fluorine-containing compound can be, *inter alia*, a straight-chained alkylene group or a branched alkylene group.

ABSTRACT

The invention relates to a fluorine-containing compound containing a substituent represented by the formula 1:

where R¹ is (a) a straight-chain alkylene group, (b) a branched alkylene group, (c) a cyclic structure containing an aromatic ring group or aliphatic cyclic group, or (d) a substituent containing an aromatic ring group and an aliphatic cyclic group, and R¹ optionally contains fluorine, another halogen, CN, oxygen, nitrogen, silicon, or alcohol, and

R² is a hydrogen atom, a straight-chain or branched alkyl group, an aromatic group, or a hydrocarbon group optionally containing an aliphatic cyclic group, and R² optionally contains fluorine, oxygen, nitrogen, carbonyl bond, or alcohol, and a plural number of R² having different structures are optionally contained in the molecule.
